The risk of falls increases with age, with substantial patient harm resulting in high healthcare utilisations. High level evidence exists for a range of effective falls prevention strategies. This session will provide an evidence-based update of falls prevention recommendations, applicable to the primary care setting.

## Learning objectives

- Identify risk factors for falls.
- Implement a systematic approach in your practice to identify patients who are at a high risk for falls.
- Perform assessment & manage patients who are at risk or have with a history of falls.
- Explain how using various strategies can reduce the risk of falls.
- Outline the appropriate referral pathway for patients.
