

### Shingles can be unpredictable:

- 97% of adults have the virus that causes shingles within them
- 1 in 3 adults will be affected by shingles in their lifetime
- Incidence and severity of shingles increases with age
- Complications can be serious and long lasting

## “Shingles disease and Zostavax vaccine” and “General Immunisation Update” Webinar November 2016

Thank you for choosing to access this webinar.

As A/Professor Litt's slides are unable to be viewed on an open platform, they will appear blank on the webinar, however audio of A/Professor Litt's presentation on the risk factors and complications of shingles disease including post herpetic neuralgia and the rationale for the use of Zostavax vaccine is available.

To enable Health Professionals to follow the presentation, they may request a copy of the slides along with the link to the webinar from Angela Newbound, Immunisation Hub Coordinator at the Adelaide PHN [anewbound@adelaidephn.com.au](mailto:anewbound@adelaidephn.com.au)

**The slides are for private use only and must not be edited, re-printed or distributed outside of your practice or organisation.**

Following Associate Professor Litt's presentation, the General Immunisation Update by Angela Newbound is available for viewing.
